Claims

5

1. Garment consisting of seamless circular-knit cotton or circular-knit polyamide (microfiber yarn) with a component of elastane, whereby the garment is provided with zones of variable elasticity (1-5),

characterized in that

10 compression zones of higher elasticity (4, 5), which are providing greater support, are knitted into the garment.

2. Garment according to Claim 1, in particular for the torso or upper part of the body, such as a bustier bra, top, T-shirt, body wrap, body suit, bathing suit or the like, consisting of seamless

15 circular-knit cotton or circular-knit polyamide (microfiber yarn) with a component of elastane, whereby the garment is provided with zones of variable elasticity (1 – 5), whereby zones of greater elasticity (4, 5), which therefore provide greater support, are knitted into the garment. characterized in that

20 two lamellar supporting compression zones of higher compression (3) extend crosswise over the back.

3. Garment according to Claim 2,

characterized in that

25 in a women's garment, an additional lamellar compression zone extends below the breast, lifting and shaping it.

4. Garment according to Claim 3,

30 characterized in that

the lamellar compression zone under the breast merges into the lower ends of the crosswise compression zones in the back.

- 7 -

5. Garment according to one of the preceding claims,
characterized in that
- 5 an additional lamellar compression zone is arranged circumferentially around the body at the
level of the cervical spine and/or the lumbar spine.
6. Garment according to Claim 5,
characterized in that
- 10 the compression zone for the abdominal region extends between the lamellar compression zone
in the region of the lumbar spine and the lamellar compression zone which is provided below
the breast to lift it.
7. Garment according to one of the preceding claims,
characterized in that
- 15 zones of variable transparency and support effect are provided.
8. Garment according to one of the preceding claims,
characterized in that
- 20 information such as the size, the material composition and/or laundry instructions are knitted
into the material.
9. Garment according to one of the preceding claims,
characterized in that
- 25 it is provided with soft, wide, non-incisive trim sections.
10. Garment according to one of the preceding claims,
characterized in that
- it is provided with a yarn of antibacterial effect.
- 30
11. Garment according to one of the preceding claims,
characterized in that

- 8 -

it is breathable, sweat-absorbing and/or quick-drying.

12. Garment according to one of the preceding claims,
characterized in that

5 it is provided with micromassage naps.

13. Garment according to one of the preceding claims,
characterized in that

it is bi-elastic and form-fitting.

10

14. Garment according to Claim 1, particularly for the lower body, such as panties, G-strings, hot pants, underpants, leggings, panty hose, corset belt or the like, made of seamless circular-knit cotton or polyamide yarn (microfiber yarn) with a component of elastane and an optional component of silver yarn, whereby the garment is provided with zones of variable compression strengths, whereby functional zones of higher compression, which therefore provide greater support, are knitted into the garment, whereby such compression zones are arranged in the abdominal, buttock, pelvic, waist and/or thigh regions, which can provide the problem zones with a slender shape,

15

characterized in that

20

at least in part several zones and/or support tapes of variable compression strength are gradually joining each other.

15. Garment according to Claim 14,
characterized in that

25

the buttock areas are at least partly surrounded by such supporting compression zones, while they themselves represent zones of lower compression, thus allowing the buttock areas to be modeled.

16. Garment according to Claim 15,
characterized in that

30

the buttock areas are completely surrounded by such supporting compression zones.

- 9 -

17. Garment according to Claim 15 or 16,
characterized in that
the zones of low compression in the buttock areas can be of transparent design.

5 18. Garment according to Claim 14,
characterized in that
a circular-knit corset belt is provided with strips of higher compression which are at least partly
diamond-shaped,
which in the abdominal and/or buttock region border on zones of lower compression, and
10 that they enclose zones of medium compression in the pelvic zone.

19. Garment according to one of Claims 14-18,
characterized in that
it is provided with a yarn of antibacterial effect, whereby it can be fitted with antibacterial sil-
15 ver yarn in the armpit and instep regions.

20. Garment according to one of the preceding claims,
characterized in that
it is provided with fishnet-like ventilation zones which can also be used as pockets.

20 21. Garment according to one of the preceding claims,
characterized in that
the inside of the pockets are fitted with electrosmog-repellant yarn.
